SEM Select Undercarriage Parts for Dozer

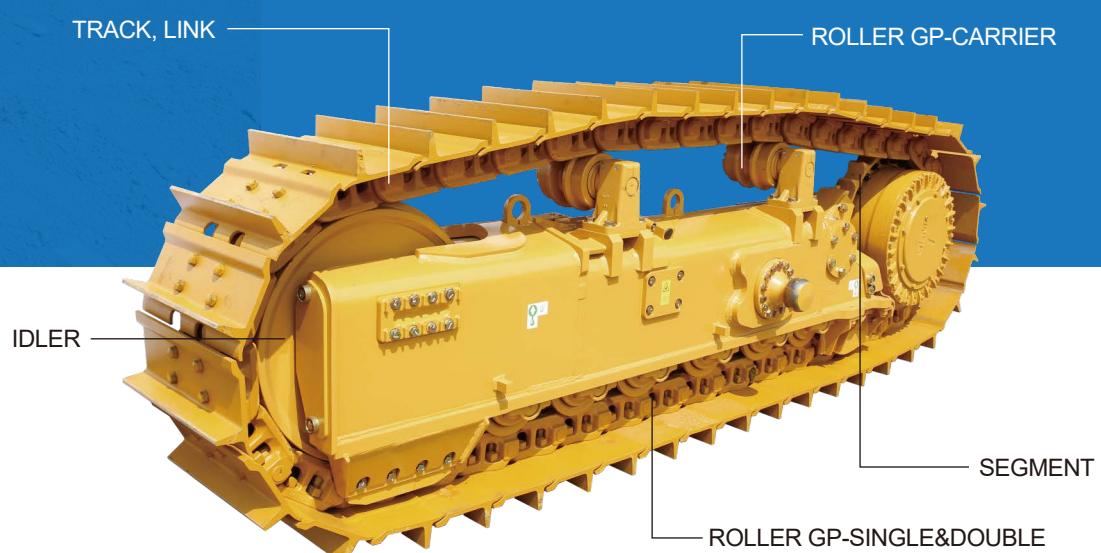

SEM Select Undercarriage Parts for Dozer

Built for Performance. Engineered for Reliability.

SEM – Strength in Every Track. SEM delivers durable, high-quality solutions for equipment needs. Undercarriage systems are designed to perform reliably in demanding conditions, offering excellent wear resistance, impact toughness and long service life. A range of OE and SEM SELECT undercarriage options helps reduce downtime, lower operating costs and improve overall machine productivity.

This undercarriage parts reference guide is designed to assist service personnel, parts managers and technicians in identifying key components of the undercarriage system. It includes essential part numbers and quantities for critical wear components such as track assemblies, rollers, idlers and links. The guide supports efficient maintenance planning and accurate parts ordering, helping machines operate at peak performance.

Disclaimer: The part numbers (PNs) listed in this guide are provided for reference purposes only. They may differ from the actual part numbers required for your machine due to ongoing technical updates and product improvements. Always verify all PNs using SEM DCP or consult your local authorized dealer before placing an order or requesting support.

SEM Select UC Parts

Reliable and Affordable Undercarriage Solutions

Undercarriage costs can account for up to 50% of the owning and operating (O&O) costs of a dozer. SEM Select UC Parts help control these costs by delivering reliable performance at competitive price points.

TRACK SHOE

- Standard track shoe thickness is increased by 10% for better bending resistance.
- Low Ground Pressure (LGP) track: FEA analysis optimizes design for durability.
- Heat-treated track shoe offers optimal hardness and wear-resistant strip on top for extended service life.

ROLLERS

Manufactured using high-quality steel and advanced heat treatment technology. Designed to meet strict wear resistance standards and extend service life.

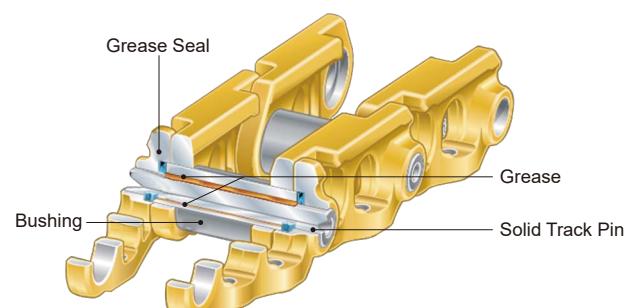

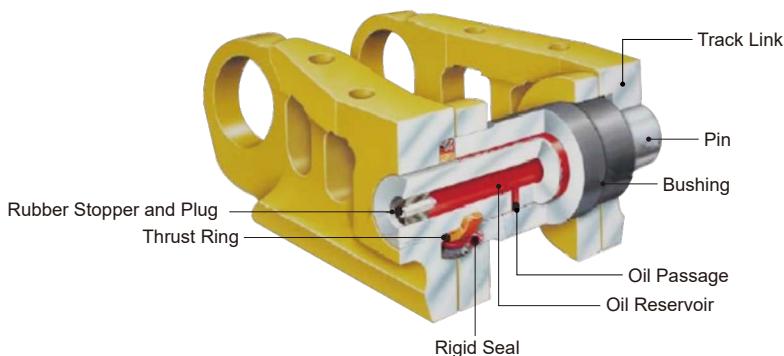

LINK ASSEMBLY & LUBRICATION

Grease lubrication reduces friction and wear between pin and bushing.

Compared to non-lubricated sealed links, grease-lubricated links extend pin and bushing life by about 20%.

Sealed and lubricated link assembly includes:

- High-quality pins and bushings
- Reserved oil storage hole inside the link
- This design minimizes friction and provides better lubrication, extending the life of lubricated links by about 50% compared to non-lubricated links.
